Selling outdoor power supplies across borders

Overview

Can subregional electricity markets connect power systems across borders?

Figure 1 presents three proposed subregional electricity markets in Southeast Asia that could connect power systems across borders. In this case, efectively designed markets would support increased integration of renew-ables, energy security, and grid reliability and resilience in the Association of Southeast Asian Nations (ASEAN) region.

What is cross-border power trade?

Depending on the form, cross-border power trade can involve diferent degrees of coordination between system opera-tors and utilities. A fully integrated whole-sale market, for example, might cover a number of interconnected countries served by a single system operator.

Can cross-border power trade support resilience?

Cross-border power trade can support goals such as improved grid resilience, increased energy access, reaching renewable energy targets, and increas-ing economic development. This fact sheet explains how cross-border trade can be a potential technical solution to support resilience.

Why do we need a regulatory framework for cross-border electricity trade?

A regulatory framework is necessary to ensure all types of cross-border electricity trade between two or more countries are clearly defned, framed, and protected. Europe has experienced an increase in cross-border electricity transmission capacity and fows over the past few decades, partly due to the European internal energy market.
