

100kW Foldable Container from Eastern Europe for Oil Refineries

Overview

What is a mini refinery?

The Mini-Refineries are skid mounted, modular crude oil distillation units (CDU) which process from 50,000 to 450,000 metric tons (1000 - 9,000 BPD) of crude oil per year and are capable of producing a variety of finished products including naphtha (straight run gasoline), kerosene, arctic and summer diesel and fuel oil.

What is a modular refinery?

Our commitment to quality and safety is unparalleled in the industry. A modular refinery is a prefabricated processing plant designed to distill crude oil into straight run gasoline, kerosene, diesel, fuel oil, and off-gas using a crude distillation unit (CDU).

What is a traditional refinery?

A traditional refinery is a high-capacity crude oil refinery constructed at a site involving various processing units to produce and meet high-quality petroleum products, such as high-octane gasoline, aviation or jet fuel, and ultra-low sulfur diesel.

When was the first mini-refinery installed?

The first mini-refinery was installed thirty years ago. This plant was a 1,000 BPD plant on a single skid containing an electric generator, a horizontally mounted tower for hand cranking to a vertical position, and permanently mounted hand jacks for jacking the skid off a truck.
