## Overview

---

What is a series & parallel configuration for 18650 & 21700 batteries?

This comprehensive guide will explore the intricacies of series and parallel configurations for 18650 and 21700 cells, helping you determine the best setup for your specific needs. In a series configuration, batteries are connected end-to-end, with the positive terminal of one cell connected to the negative terminal of the next.

How many cells are connected in parallel?

When connecting cells in parallel all of the negative terminals are connected together and all of the positive terminals are connected together. The capacity of the parallel group is the sum of the capacity of the cells. Hence three 5Ah cells connected in parallel will give a total capacity of 15Ah. 3 cells connected in parallel.

What is a parallel configuration?

In a parallel configuration, all positive terminals are connected together, and all negative terminals are connected together. This arrangement has the following effects: Example: Four 3000mAh cells in parallel would have a total capacity of 12000mAh ( $4 * 3000\text{mAh}$ ) at the same voltage as a single cell.

Is 21700 a good battery pack?

A: Consider your space constraints, capacity needs, and budget. 21700 cells offer higher capacity but may not fit all applications. Q: What's the best way to charge a series-parallel battery pack?
