## Overview

Should you connect solar panels in series or in parallel?

There are two main types of connecting solar panels – in series or in parallel. You connect solar panels in series when you want to get a higher voltage. If you, however, need to get higher current, you should connect your panels in parallel.

How many solar panels are connected in a series?

A set of two solar panels connected in series Series Voltage:  $V_1 + V_2 + \dots + V_n$   
 $12V + 12V = 24V$ . (Voltage is additive in series connection) Series Current:  $I_1 = I_2 = \dots = I_n$   
 $10A = 10A = 10A$ . (Current is same in series connection). Now, we have two sets of series connected solar panels. If we connect these two set in parallel: Parallel Voltage:.

How to connect two solar panels in series?

To do this wiring, make two sets (pairs) of PV panels and connect them in series. This way, you will have two pairs of solar panels connected in series. Now, connect the two sets of series connected solar panels in parallel as shown in the following fig. Now, you are having four 12V, 10A solar panels connected in series-parallel configuration.

How many solar panels should a solar array have?

If you decide to apply a mixed connection, it's practical your solar array to comprise an even number of panels (a multiple of 2), for example, 4 panels (2 in series and 2 in parallel) or 6 panels (3 in series and 2 in parallel).

Here is a series connection of solar panels of different voltage ratings and the same current rating: You can see that if one of the solar panels has a lower voltage rating (and the same current rating) compared to the remaining panels, the output power is lower than in the previous example but the loss is not significant. Things, however, are enti See more on solarpanelsvenue A1 Solar Store
