

# 72V solar panel solar panel

## Overview

---

What is a 72-cell solar panel?

72-cell solar panels are popular for commercial and ground-mounted installations and tend to cost less per watt and reduce installation time by requiring fewer modules than 60-cell modules. They appear similar to 60-cell solar panels but feature an extra 2 rows of solar cells added to the length of the module.

What is a 72-cell solar PV module?

A 72-cell solar PV module is a Polycrystalline module that consists of multiple silicon crystals in each cell, allowing for better electron movement. It has a maximum voltage capacity (vmpp) of 38.1V and a module efficiency rate of 17.0%.

How much does A 72-cell solar panel weigh?

72-cell solar panels weigh around 61.73 pounds. As you may recall, these larger panels usually provide 350 to 400 watts. The weight of a solar panel per unit is an important consideration when deciding which size is best for your home, which we will discuss further in a later section.

What are the two main types of solar panels?

These solar panels are available with monocrystalline and multicrystalline technologies. Monocrystalline solar panels are desirable for those requiring as much solar power harvest as possible for a limited area. Solar panels with monocrystalline technology are one of the two main types.
