

# AC screen inverter

## Overview

---

Why do LCD screens need an inverter?

Inverters are essential for an LCD screen as they convert DC (Direct Current) from the power supply to AC (Alternating Current), enabling the backlight to function. Without an inverter, the screen would remain dim and unusable because the backlight is what makes the display visible.

How does an LCD inverter work?

In simple terms, an LCD inverter takes the direct current (DC) power from the device's battery or power supply and converts it into the alternating current (AC) power needed to light up the screen's backlight. This backlight is what allows you to see the images on the LCD panel. There are two main types of LCD backlights that use inverters:.

What is a laptop inverter?

A laptop inverter is an essential component in the display functionality of a laptop. Its primary role is to convert direct current (DC) power from the laptop's battery or power adapter into alternating current (AC) power, which is required to power the backlight of the laptop's screen.

Should I replace the LCD screen or change the inverter?

If you are not comfortable dismantling your LCD screen, it's often more cost effective to replace the whole LCD than to change the LCD inverter unit. Without light, and LCD screen might as well be a paperweight. Many LCD screens use a cold-cathode fluorescent lamp that requires an inverter.
