

# **Air transportation of energy storage batteries in Jakarta**

## Overview

---

Can battery swaps support sustainable transportation in Indonesia?

Battery swaps have great potential to support sustainable transportation in Indonesia. By reducing carbon emissions and air pollution, and supporting government programs for the transition to clean energy, battery swaps can be an innovative solution to Indonesia's environmental and energy challenges.

What is the environmental impact of battery electric bus in Indonesia?

Increase in renewable energy share for electricity generation of Indonesia is needed. Lithium-ion battery (LIB) has the highest environmental impact. Higher LIB reuse rate results in lower environmental impact of battery electric bus.

What is the minimum battery production capacity in Indonesia?

minimum battery production capacity of approximately 36.8 GWh to meet its EV targets. Currently, the country has only 10 GWh of NMC battery cell capacity (from PT HLI Green Power) and 100 MWh of LFP battery cells (from PT Gotion Green Energy Solutions Indone.

Can battery swaps improve air quality in Indonesia?

As a country with high levels of air pollution, Indonesia needs innovative solutions to reduce carbon emissions and improve air quality. One promising solution is the use of battery swaps in the transportation system.
