

All black components are better than regular components

Overview

Should I choose a black or white PC case?

If you want a sleek and sophisticated look, go for the black case. However, if you're aiming to make a bold statement, the white case is perfect for displaying your rig! But what about creating a mixed look with both colors?

Is that a good option?

Should I choose a black or white PC case for my build, or mix both colors for a unique look?

.

What color do PC components come in?

When buying PC components, the latest gadgets, or any electronics, you may have noticed that the main color most of them sold in is black. With a few exceptions of white, silver, and gray, black is the most common color for electronics.

Why do manufacturers sell their products in black?

Black, white, and silver have been shown to be the least offensive to people, hence appealing to a larger audience. Factoring in all the other aspects, manufacturers choose to sell their products in black. Note: This article is subjective and solely reflects the writer's opinions.

Would a black case heat up more than a silver case?

The medium green colored metal was 112 degrees, the black components were up there at 144. That surprised me. and I related this discovery to my PC case search. I would surmise the case would heat up more if it were black. Even with all the fans running, it would seem to me that the interior of a black case would be warmer than a silver interior.
