

# **All-vanadium liquid flow battery lithium titanate battery**

## Overview

---

In the light of excellent electrochemical reversibility of vanadium-based redox couples in redox flow batteries (RFB), we propose an all-vanadium aqueous lithium ion battery (VALB) using a  $\text{LiVOPO}_4$  cath.

What is a vanadium redox flow battery?

Vanadium redox flow batteries are praised for their large energy storage capacity. Often called a V-flow battery or vanadium redox, these batteries use a special method where energy is stored in liquid electrolyte solutions, allowing for significant storage. Lithium-ion batteries, common in many devices, are compact and long-lasting.

What is an all-vanadium flow battery (VFB)?

Learn more. The all-vanadium flow battery (VFB) has emerged as a highly promising large-scale, long-duration energy storage technology due to its inherent advantages, including decoupling of power and capacity, high safety, scalability, long cycle life, and environmental compatibility.

Which aqueous lithium ion battery is based on a high concentration electrolyte?

Combining the electrochemical reversibility of vanadium ions and electrochemical stability of high concentration electrolyte, we constructed an all-vanadium aqueous lithium ion battery (VALB) based on the  $\text{Li}^+$  intercalation chemistry of  $\text{LiVOPO}_4$  cathode and  $\text{VO}_2$  anode in 20 m  $\text{LiTFSI}$  aqueous electrolyte.

Are lithium-ion batteries a viable energy storage technology?

Among various energy storage technologies, lithium-ion batteries (LIBs) and Vanadium Redox Flow Batteries (VRFBs) have emerged as leading solutions in portable electronics to large-scale grids respectively. Both technologies depend heavily on membranes for efficient ion transport and energy conversion.
