Overview

How much power can a portable power station hold?

While a particular power station might claim to hold 1,000 watt hours, the actual amount of usable power you can get out of it is a different story. The best portable power stations also have an onboard computer that shows you how much energy is left in your unit, as well as how much power it's currently using.

How long does a portable power station last?

Like any battery, for example one in a phone or laptop, this will wear down over time until the power station no longer holds charge. General estimates put the lifespan of a portable power station at around ten years. Expect it to last approximately five years minimum with standard use. What can you run on a portable power station?

.

What accessories do you need for a portable power station?

One of the most common accessories is going to be a cord to connect to similar power stations in series, often times doubling your power output. Some portable power stations have a light bar built into the housing, which is useful for seeing at night. Anker's Solix C300 also includes a pop-up camping light.

How often should a portable power station be re-upped?

While all portable power stations should have their power re-upped on a regular basis (plan for every three months), my testing showed that some portable power stations did a better job of retaining power over that period of time than others.
