## Overview

---

What is a double glass solar module?

In the ever-evolving world of photovoltaic technology, double glass solar modules are emerging as a game-changer. By encapsulating solar cells between two layers of glass, these modules offer unparalleled durability and efficiency. But what exactly sets them apart?

What are double glass solar modules?

.

Are double-glass solar modules reactive or non-reactive?

Furthermore, comparing to plastic backsheets (the back material of single-glass solar module) which are reactive, glass is non-reactive. This means that the whole structure of Raytech double-glass solar modules (two layers of glass and one layer of solar cells in the middle) are highly resistant to chemical reactions such as corrosion as a whole.

What is a double glass module?

In contrast, double glass modules replace the polymer layer with another glass sheet, creating a robust sandwich structure. At IBC SOLAR, we use 2,0 mm x 2,0 mm glass layers, whereas some other market offerings use thinner 1,6 mm x 1,6 mm layers. This ensures greater durability and longevity.

Are double glass modules bifacial?

Dual-sided energy Capture: Many double glass modules are bifacial, allowing them to harness sunlight from both sides. This can lead to energy gains of up to 25%, especially when installed over reflective surfaces.

## Are all double-glass modules monocrystalline

### What are Double Glass Solar Panels?

What Is The Distinction Between Single and Double Glass Solar Panels?What Are Double Glass Mono Perc Solar Panels?What Are Double Glass Solar Panel Advantages?Typically, solar panels have a front glass panel and a back plastic sheet. These single-sided glass panels are supported by frames across the entire construction. Manufacturers have developed double glass solar panels in recent years. Instead of a plastic back sheet, these panels have a second layer of glass on the back.
