## Overview

---

What is a rooftop solar photovoltaic system?

A rooftop solar photovoltaic (PV) system uses solar panels mounted on the roof of a building to convert sunlight into electricity. Rooftop solar systems rely on the photovoltaic effect, where cells generate electricity in response to sunlight.

What is a solar roof?

A solar roof refers to an integrated roofing system that uses photovoltaic technology to generate electricity directly from sunlight. Unlike traditional solar panels, which are mounted on an existing roof, solar roof tiles are built into the roof itself, replacing conventional roofing materials like shingles or tiles.

What are the different types of rooftop solar PV systems?

The three main types of rooftop solar PV systems are off-grid rooftop solar systems, on-grid rooftop solar systems and hybrid solar systems (grid-tied with battery). Off-grid rooftop solar systems include a solar battery to store excess energy, so owners have backup power during periods of low sun.

Are solar panels bad for your roof?

Rooftop solar installations come with their own set of problems that shorten the lifespan of the system, like the fact that the holes made in the roof to attach the racking are prone to leaks, and the limited airflow between the solar panels and the surface of the roof increases the likelihood of 'hot spots' forming.
