

# Ashgabat Smart Grid Huawei 5G Base Station

## Overview

---

Can a smart lithium battery power a 5G site?

That means at peak loads, the smart lithium battery can power the load, support site peak shaving, and reduce the need for the grid to allocate capacity at the typical power levels. It requires no changes to grid power, cutting retrofitting costs for a single site by more than US\$1,800 and lowering the initial investment costs of 5G evolution. 3.

What is a 5G virtual power plant?

This model encompasses numerous energy-consuming 5G base stations (gNBs) and their backup energy storage systems (BESSs) in a virtual power plant to provide power support and obtain economic incentives, and develop virtual power plant management functions within the 5G core network to minimize control costs.

What is a 5G communication base station?

The 5G communication base station can be regarded as a power consumption system that integrates communication, power, and temperature coupling, which is composed of three major pieces of equipment: the communication system, energy storage system, and temperature control system.

Are 5G base stations energy-saving?

Given the significant increase in electricity consumption in 5G networks, which contradicts the concept of communication operators building green communication networks, the current research focus on 5G base stations is mainly on energy-saving measures and their integration with optimized power grid operation.
