

# Australia s self-built house with solar panels on the roof

## Overview

---

8.1 Stars Heating: 26.2 MJ/m<sup>2</sup>/year Cooling: 16.6 MJ/m<sup>2</sup>/year Total: 42.8 MJ/m<sup>2</sup>/year

Does Australia have rooftop solar?

Rooftop solar in Australia has reached new heights hitting 4 million installations across the country. With Australians installing about 300,000 rooftop systems a year, 1 in 3 Aussie homes now have rooftop solar. Solar uptake has been driven by the Small-scale Renewable Energy Scheme (SRES) which cuts upfront costs by about 30%.

What makes a solar home a smart home?

These homes are equipped with rooftop solar panels, high-performance insulation, and smart energy management systems to achieve energy neutrality. The solar panels capture sunlight, converting it into electricity that powers the home. Meanwhile, advanced insulation keeps the house warm in winter and cool in summer, minimizing energy loss.

Do solar roof tiles work with battery storage systems in Australia?

Yes, solar-integrated roofing systems work with all standard battery storage solutions available in Australia. The DC electricity generated by solar roof tiles is converted to AC by an inverter, just like traditional solar panels. This makes them compatible with popular battery systems from manufacturers like Tesla, LG, and Sonnen.

What is a passive solar home?

New house using passive solar design, including a combination of heavy and lightweight materials, to overcome the constraints of a narrow block where the longest side faces west. The home has a 6.2 kilowatt (kW) photovoltaic system with east-facing panels forming the roof of the carport and west facing panels mounted on the main house roof.
