How much solar PV will Africa have by 2030?

IRENA estimates that with the right enabling policies, Africa could be home to more than 70 gigawatts of solar PV capacity by 2030. The report discusses challenges in policy making and proposes a co-ordinated effort to collect data on the installed costs of solar PV in Africa, across all market segments.

How much does solar cost in Africa?

Capital costs for solar are 3 to 7 times higher in Africa than in developed countries, and the continent only receives 3% of global energy investment - far from the \$200 billion per year needed to achieve energy access and climate goals.

How many solar panels were installed in Africa in 2024?

2.4 GW of new solar capacity was installed in Africa in 2024. South Africa and Egypt continue to be leading the pack, but new emerging markets are stepping up. While this is a slight decrease from 2023, the shift reflects a broader regional market transformation.

Does Africa have solar power?

Africa holds vast solar potential, with 60% of the world's best solar resources, yet solar PV currently accounts for only 3% of the continent's electricity generation. As global efforts intensify to triple renewable energy capacity by 2030, Africa's role in achieving this target is more critical than ever.
