

# Battery cabinet selection for lead-acid batteries

## Overview

---

How do I choose the right battery for my cabinet?

Picking the right batteries is key for your cabinet. Look at options like lead-acid or lithium iron phosphate batteries. Lead-acid ones need separation to stop corrosion, while lithium ones work more efficiently. Make sure they match popular brands and leave space between them. Add safety tools like hydrogen release devices to prevent problems.

How to design an outdoor Battery Cabinet?

Use locks to stop unwanted access, fireproof materials for emergencies, and waterproofing to block rain. Good wiring and grounding are also important to prevent electrical risks. Design your outdoor battery cabinet with these 5 steps: choose the right size, materials, cooling, safety features, and ensure easy maintenance.

Should you separate lithium ion and lead-acid batteries?

If your room will house both lead-acid and lithium-ion batteries, it's good practice to physically separate these systems, especially considering their different safety and environmental requirements. The floor of a battery room must be robust and resistant to chemical corrosion.

Which accumulator batteries are included in the cabinets covered by the technical specification?

The cabinets covered by the technical specification have been designed to contain the hermetic lead-acid electric accumulator batteries.
