

# Canberra solar power station energy storage design

## Overview

---

What is the Big Canberra battery?

The Big Canberra Battery will play a crucial role in managing peak electricity use demand and in supporting the ACT's transition to a more sustainable energy future. For technical specifications of our work on the Big Canberra Battery, or to discuss engaging us on similarly ambitious battery storage projects, please contact our team.

Will big battery power a third of Canberra households in 2025?

Canberra Times: ground breaking ceremony, plugging in profits from a big battery. ITP Renewables was engaged by ECU Energy to provide expert planning support throughout the development and delivery phases of the 250 MW Big Canberra Battery system, which will begin powering one-third of Canberra households from 2025.

Why do we need balancing energy storage technologies in Australia?

Increasing gap between maximum and minimum operational demand in Australia call for urgent need of balancing storage technologies. Fast response hybrid battery-supercapacitor energy storage are deemed prudent solution for the transition period, while PHES and Hydrogen are for long-term storage.

How much energy does a rooftop solar PV system produce?

As a simple example, a rooftop solar PV system yields about 4.5 times energy (in kWh) of the rating of the solar panels during the average day compared to a baseload coal fired thermal power station that can produce nominally 24 times its rating during a day.
