

Charging the LiFePO₄ battery pack

Overview

Do I need a charger for LiFePO4 batteries?

Yes, using a charger specifically designed for LiFePO4 batteries is important. LiFePO4 batteries require a different charging algorithm than other battery chemistries, and using a charger with the correct voltage and charging profile ensures safe and efficient charging.

How do I charge a 12V LiFePO4 battery?

Voltage Cut-off: Ensure your charger features an automatic voltage cut-off set for the appropriate level (typically 14.6V for 12V LiFePO4 batteries).
Float Charge Requirements: For Ionic 12V Deep Cycle batteries, set your charger to charge up to 14.6V for 30 minutes and then float charge at 13.8V.

How do I charge a LiFePO4 battery with solar?

Charging LiFePO4 batteries with solar has become increasingly popular for RVs, cabins, and remote setups. But to do it right, you need a compatible solar charge controller. Use an MPPT or LiFePO4-compatible PWM charge controller. Set the charge voltage for LiFePO4 battery systems to: Some controllers let you fine-tune voltage presets.

How often should A LiFePO4 battery be charged?

Charging LiFePO4 batteries to around 80-90% of their capacity for regular use is generally recommended. Charging them to 100% occasionally can help balance the cells, but frequent full charges may reduce their lifespan. Do I need a special charger for the LiFePO4 battery?
