

# **China s solar container communication station inverter grid-connected industry prospects**

## Overview

---

Are Chinese solar power inverters connected to critical infrastructure grids?

U.S. energy officials have launched an investigation after discovering unauthorized communication equipment embedded within Chinese-manufactured solar power inverters connected to critical infrastructure grids across the country.

Are Chinese-made solar inverters a supply-chain vulnerability?

Leading renewable energy operators worldwide are confronting a disturbing supply-chain vulnerability: undocumented communication modules found in Chinese-made solar inverters and batteries.

Are Chinese inverters a threat to solar power?

This vulnerability is especially dangerous given the growing penetration of solar power on Western grids, where in some regions, Chinese-manufactured inverters control upwards of 200 gigawatts of generating capacity – equivalent to more than 200 nuclear power plants.

Will Chinese inverters affect European grids?

Some, like Florida Power & Light Company, are reportedly reducing their reliance on Chinese inverters, although the utility declined to comment. “Ten years ago, if you switched off the Chinese inverters, it would not have caused a dramatic thing to happen to European grids,” said Philipp Schroeder, CEO of German solar developer 1Komma5.
