

# Comparison of three types of folding container generators with traditional generators

## Overview

---

What is a containerised generator?

Like the canopy sets, containerised generators are built to house the generators and ensure they are soundproof, which is completed by the containers being heavily fitted with soundproofing technology, and like the open sets can reach a high-poweroutput of 3000KVA for diesel and up to 2000KW for gas power.

What are the two types of generators?

What are the two basic types of generators?

1. Direct current (DC) generators: It converts mechanical energy into DC power. 2. Alternating current (AC) generators: It converts mechanical energy into AC power. What are the main parts of a generator?

.

Are containerized generators reliable?

Years of use in the rental, oil and gas, mining and other heavy-duty industries have tested the reliability, usability and durability of our containerized generators. Our primary design challenges in developing this line of containerized generators were usability, reliability and functionality for the end user.

Should a generator be enclosed or able to be open?

Upon applying for a generator, many applications will require a specific type of generator to be used and specify if it needs to be enclosed or able to be open. This can raise questions as to why this is required and within this article, we can explain in more detail by discussing the difference between all the options available. Open-Sets
