

# Conductive sheet of solar panels

## Overview

---

Which encapsulation sheet adhesive is best for solar panels?

SOLAR-IMB™ and SOLAR-TDB™ back encapsulation sheet adhesive instantly melt bonds to solar cells without an EVA interface layer during the same vacuum lamination process for solar panel. The SOLAR-IMB™ and SOLAR-TDB™ are ideal for both thin film and m-Si and p-Si solar panels.

What is AIT thermally conductive insulated metal back sheet?

AIT thermally conductive insulated metal back sheet (IMB™) incorporates the strength and heat spreading capability of a 3-5 mil aluminum sheet and electrical insulating and moisture resistance of modified polyethylene and PVDF while providing more than a 10 fold increase in thermal conductivity over a traditional EVA encapsulated TPT back sheet.

Why do solar panels need a melt encapsulation process?

This melt-encapsulation processing without the need for curing enables the roll-to-roll lamination production of thin film solar panels. As well, these melt-encapsulating processes with UV resistant moisture-resistant materials dramatically enhance the processing and performance of solar panels.

Which solar panels are best for M-Si & p-Si solar panels?

The SOLAR-IMB™ and SOLAR-TDB™ are ideal for both thin film and m-Si and p-Si solar panels. The ambient bond strength to silicon backside and metallization is well over 1000 psi and maintains at least 50% of the mechanical strength up to 85°C.
