

Connect solar panels of different specifications to one string

Overview

How to string solar panels in series?

Stringing solar panels in series is basically connecting the wires next to each other. You must be familiar with a typical battery. There are two types of terminals in solar panels which are positive and negative terminals.

What is a solar panel & a string?

A solar panel, or we can say a PV module, is made up of several cells, where multiple solar panels are wired in a series or parallel. The design is known as a solar array. A string consists of solar panels that are wired in a series set to one input on a solar string inverter.

Can solar panels be stringed in parallel?

When stringing panels are in series, each additional panel is involved in the total voltage, which is symbolized as (V) of the string, but the current (I) in the string remains constant. Stringing solar panels in parallel is a bit complicated.

What is solar string sizing?

The design is known as a solar array. A string consists of solar panels that are wired in a series set to one input on a solar string inverter. In case two or more solar panels are wired together, that is a solar / PV array. String sizing depicts how many solar panels can be wired to an inverter to obtain the best results.
