

Contactor configured for solar inverter

Overview

Why do solar inverters need a contactor?

By feeding power into the grid or battery storage systems remotely and automatically, the contactor supports strategies that will improve the energy efficiency of PV installations. Switching DC in solar inverters differs significantly from standard applications.

What is a contactor for a 1500 volt solar inverter?

contactors are specifically designed for 1500 V DC PV solar central inverters. These contactors are of the block type design with 2 main poles. The main poles are fitted with special arc in e range (e.g. 100. 250 V DC), only 2 coils to variations reduced panel energy consumption very 11.81"29 .5 11.5" 122 4.8.
