

# Cook Islands Solar Panel System

## Overview

---

What is the future of power in the Cook Islands?

Now with full-time power, the future has taken a new shape for Cook Islands' residents thanks to government renewable energy – leading to an improved quality of life, and increased economy activity. The improved livelihood in the communities that now have the benefit of reliable, 24hour power supply is immeasurable.

How did we help the Cook Islands Government achieve its aim?

We helped the government realise its aim. To support the Cook Islands Government, the New Zealand Government – through the Ministry of Foreign Affairs and Trade, installed mini-grid photo-voltaic power systems in a number of villages on six remote islands. We helped manage this logistically enjoyable project.

Why is there no electricity on the islands?

Bad weather and other events often prevent goods arriving on the islands. Previously, electricity was provided by diesel generators, usually for around 12 hours per day. Power supply was effected by issues of reliability, maintainability, capacity and access to adequate, regular diesel supplies.

How did the island construction system work?

There were no sources of hard aggregate for concrete or reliable earthmoving equipment on the islands, so all materials, equipment and tools required for construction were supplied via a freighter. Using the latest equipment and smart metering, the systems can be supported remotely.

## Cook Islands Solar Panel System

---

Cook Islands solar power system types

Nov 10, 2024 · The first of four solar power stations commissioned under the Cook Islands Southern Renewable Energy Project will be officially opened on the island of Mitiaro this week, ...

---

Cook Islands Renewable Energy , Beca

The Cook Islands Government aims to achieve 90% of their power needs from renewable energy by 2020. We helped the government realise its aim. To support the Cook Islands Government, ...
