

Cost-effectiveness analysis of a 10kW mobile energy storage container in Kuwait

Overview

What is the total system cost of mobile energy storage?

The total system cost of mobile energy storage is the same as that of fixed energy storage, including investment cost, operating cost, and recovery cost. Unlike mobile energy storage, which incurs transportation costs during energy transportation, fixed energy storage incurs line transportation costs during energy transportation.

How can mobile energy storage systems improve the economy?

With the advancement of battery technology, such as increased energy density, cost reduction, and extended cycle life, the economy of mobile energy storage systems will be further improved. Future research should focus on the impact of new technologies on system performance and update model parameters in a timely manner.

How much will mobile energy storage cost in 2050?

By 2050, the promotion of renewable energy in Northeast and North China is expected to reach 75% and 66%, respectively. At this time, the overall system cost of mobile energy storage will further increase to 1.42 CNY/kWh and 0.98 CNY/kWh.

What is mobile energy storage?

As a flexible energy storage solution, mobile energy storage also shows a trend of decreasing technical and economic parameters over time. Like fixed energy storage, the fixed operating costs, battery costs, and investment costs of mobile energy storage also decrease with the increase of years.
