## Overview

How can a high voltage multiplexer improve battery monitoring accuracy?

A high voltage multiplexer of 17-cell battery monitoring analog front end (AFE) is adopted to acquire each cell voltage for accurate monitoring. Besides, a current compensation scheme is proposed to tackle the current leakage in each channel to further improve the acquisition accuracy.

Are battery pack monitoring schemes accurate?

Although some battery pack monitoring schemes have increased the number of measurable channels in a chip for higher voltage battery packs, the issue of accuracy caused by the common mode voltage difference in each unit of series battery pack remains unsolved.

What are the topologies for battery cell detection?

The topologies in Ref. propose an eight-channel high-voltage multiplexer for battery cell detection. In addition, The design in Ref. introduces a 7-cell series-connected battery monitoring chip that supports  $\pm 7$  mV measurement accuracy.

Why does battery monitoring AFE consume more power?

For instance, in a system application, it is common for the lowest cell to consume more power each time the battery monitoring AFE polls each cell for sensing. This can lead to an imbalance in the state of charge (SOC) of each cell.
