## Overview

---

Do Island power systems have centrally managed storage facilities?

Centrally managed storage facilities in island power systems dominate the relevant literature. Table 4 includes the papers dealing with the centrally managed storage concept. Table S2 of the Supplementary data and Fig. 7 present additional details for the most representative ones.

What are the different storage typologies for Island applications?

The review eventually emphasizes the two predominant storage typologies for island applications; the centralized storage concept, where storage operates independently of renewable installations, and a hybrid concept, in which storage and renewables cooperate to inject controllable RES energy into the island grid.

How can non-interconnected Island power systems be independent from fossil fuels?

The pathway towards the independence of non-interconnected island (NII) power systems from fossil fuel involves the massive implementation of variable renewable energy sources (RES) .

What are the best storage technologies for Islands?

In , batteries and pumped-hydro storage have been identified as the leading storage technologies for islands, with the former effectively applicable to small and medium size system and the latter to large systems with natural reservoirs.
