Overview

Does grid-connected distributed photovoltaic power generation influence the voltage of the distribution network?

This paper aims to investigate the factors influencing the voltage of the distribution network caused by grid-connected distributed photovoltaic power generation in China's energy production structure, which is increasingly relying on clean energy, particularly solar energy for photovoltaic power generation, due to its reliability and low cost.

Does a distributed generation from solar photovoltaics (dgpv) impact assessment study use a T&D model?

Abstract—Rapid growth of distributed energy resources has prompted increasing interest in integrated Transmission (T) and Distribution (D) modeling. This paper presents the results of a distributed generation from solar photovoltaics (DGPV) impact assessment study that was performed using a synthetic T&D model.

Do distributed photovoltaic systems contribute to the power balance?

Tom Key, Electric Power Research Institute. Distributed photovoltaic (PV) systems currently make an insignificant contribution to the power balance on all but a few utility distribution systems.

Can distributed PV power sources be used in multi-level distribution networks?

The research results provide key theoretical foundations and calculation tools for the deepening application of distributed PV power sources in multi-level distribution networks, system stability assessment, and engineering economy analysis.
