## Overview

---

Do you need a battery for a solar inverter?

Not necessarily. Whether or not you need a battery depends entirely on the type of solar inverter you're using and your specific energy goals. If you're planning an off-grid system in a remote area, then yes—you absolutely need batteries to store energy and provide power at night or during bad weather.

Can a solar inverter power a home without a battery?

Not always. Depending on your setup, it's entirely possible to power your home using a solar inverter without ever installing a battery bank. But it's not as simple as just plugging in some panels and flipping a switch.

Do solar panels need a battery?

In grid-tied systems, a battery is not necessary. During sunny hours, solar panels feed electricity through the solar inverter, powering your home in real-time. Any excess energy can be sent back to the grid, often earning you credit through net metering.

Can a solar inverter power your home at night?

This setup allows them to power their homes during the day and rely on the grid at night or during cloudy periods. For example, a homeowner in Johannesburg with a Afore solar inverter can use solar power directly during the day and pull electricity from the grid at night, without ever needing a battery.
