

Does the battery cabinet in the computer room need to be grounded

Overview

Battery racks should be grounded to prevent electrical hazards, reduce fire risks, and ensure compliance with safety standards like NEC Article 480 and NFPA 70. Do server racks need to be grounded?

In the context of server racks, both grounding and bonding are essential. The rack itself must be grounded to the facility's grounding electrode system. Additionally, all metallic parts of the rack and equipment installed within it should be bonded together.

Should you ground a network rack?

Bonding is found not only in industrial facilities but also in domestic households. Washing machines, bath tubs, refrigerators are grounded in living apartments. This text will cover network rack grounding, the stages of bonding, and the main requirements for how to ground a network rack. Should you ground your server rack?
