

# Ecuador 5g base station power supply charging standards

## Overview

---

What is the coverage area of 5G high-frequency base stations?

The radius of coverage area of 5G high-frequency base stations will be less than one-tenth of that of 4G base stations, and the coverage area of 5G high-frequency base stations will be less than one percent of that of 4G base stations. The deployment of macro base stations is difficult and the site resources are not easy to obtain.

How to calculate sectional area of 5G power supply cable?

The Sectional area of the 4G power supply cable is calculated by 6mm<sup>2</sup> The Sectional area of the 5G power supply cable is calculated by 16mm<sup>2</sup>. installed a DC/DC converter to increase the system 57V or 60V.

What is the work difficulty of 5G network & powering solution?

work difficulty. 1) 5G Network general descriptions, cells 2) Powering solution divided into local powering, remote coverage, and impact on powering strategy, powering and share infrastructures in three different type of 5G network and feeding solutions cases and there will be very technical specifications.

Which power supply is best for a BBU & RRU?

A power supply with a capacity of 100 W to 350 W was sufficient to cover many applications. Forward converters were a good choice and have been employed for years in telecom BBUs and RRUs. With the growing demand for mobile data, new markets and applications continue to emerge.
