

# Effects of solar air conditioning in Türkiye

## Overview

---

A research group from the Burdur Mehmet Akif Ersoy University in Turkey has investigated how solar power may help reduce carbon emissions and improve the performance of heating, ventilation, and air conditioning (HVAD) systems. Why are solar-powered air conditioners so popular?

Solar-powered air conditioners have become more popular in recent years. The problems caused by our reliance on fossil fuels may be surmounted with the help of solar cooling systems that use solar collectors. Solar cooling systems may utilize low-grade solar energy, making them popular in the construction industry.

Does solar power supply air conditioning after the sun goes down?

erationsection, and the solar system's power conversion module(PCM) supplies the air conditioningsystem's electricityneeds after the sungoes down. The seasonal study took placeover fivehot months (June through October), and Augustwas selectedto investigate the proposed system's performance as it has the highest cooling demand.

Why are solar cooling systems popular in construction industry?

Solar cooling systems may utilize low-grade solar energy, making them popular in the construction industry. Solar cooling systems powered by photovoltaic-thermal (PVT) collectors have been the subject of much research to improve the thermodynamic and economic performance of solar cooling systems.

Can solar panels and cool materials affect a building's energy demand?

The combined effect of shading caused by PV panels and cool materials could significantly change the roof surface temperature, and the building energy demand.
