

Electricity cost of commercial energy storage equipment

Overview

How much does a commercial battery energy storage system cost?

Average Installed Cost per kWh in 2025 In today's market, the installed cost of a commercial lithium battery energy storage system — including the battery pack, Battery Management System (BMS), Power Conversion System (PCS), and installation — typically ranges from: \$280 to \$580 per kWh for small to medium-sized commercial projects.

What are the benefits of commercial power storage?

Some of the advantages of commercial power storage include: The benefits of installing battery storage at your facility can be great; however, one must evaluate the total cost of ownership of an energy storage system to determine if it's a good fit. Let's explore the costs of energy storage in more detail.

How much does energy storage cost?

Let's explore the costs of energy storage in more detail. Although energy storage systems seem attractive, their high costs prevent many businesses from purchasing and installing them. On average, a lithium ion battery system will cost approximately \$130/kWh.

Are battery electricity storage systems a good investment?

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials.
