

# **Energy emergency communication command base station work**

## Overview

---

With the development of 5G technology, a convenient and fast emergency communication solution is needed when the local ground base station is unavailable for disaster. This paper put forward.

Can a UAV be used as a mobile base station?

Therefore, in recent years, there has been significant researches focused on the utilization of the UAV as a mobile base station (BS) or a relay for the establish of emergency communication networks , , . Some recent research works have considered the throughput optimization of UAV-assisted emergency communication network.

What is a WPT-enable UAV-assisted emergency communication system?

We consider a WPT-enable UAV-assisted emergency communication system with three ground mobile users. These users are distributed within a  $200 \times 200$  m<sup>2</sup> plane area. Users U1 and U2 are fixed route mobile users, while user U3 follows the RWM with its movement area centered at  $\{175, 100\}$  T m.

How to optimize UAV-assisted emergency communication network throughput?

Some recent research works have considered the throughput optimization of UAV-assisted emergency communication network. In , a unidirectional hover-flight-hover trajectory design method with power allocation was proposed for UAV-assisted emergency communication network optimization.

## Energy emergency communication command base station work
