

# Energy storage installations slow in Aarhus Denmark

## Overview

---

How much energy does a storage building cost in Denmark?

Some Danish institutions, having storage buildings or archives still maintained with strict climate control by full air-conditioning, continue to be operated at higher energy costs (30 kWh/ m<sup>3</sup> or higher) (Ryhl-Svendsen et al. 2012).

What is the climate like in Danish storage buildings?

A few of the oldest buildings experience peak summer temperatures of about 30°C (Table 3). Most Danish storage buildings for general collections have a climate control regime, which allows 40–60% RH, which is within the ‘basic climate zone’ as discussed above.

What is the air quality in Danish storage buildings?

Air quality in 36 Danish storage buildings was investigated, ranging from naturally ventilated historical buildings to modern purpose-built storage facilities, some with full HVAC climate control systems. Most were able to maintain a humidity level within 40–60% RH.

How much CO<sub>2</sub> does Aarhus emit?

In 2022, the energy sector in Aarhus emitted 698,000 metric tons CO<sub>2</sub>e. Today, about 70% of Aarhus’ energy needs are met by sustainable energy sources, including biomass, which covers 69% of the municipality’s energy needs.

## Energy storage installations slow in Aarhus Denmark
