

Energy storage station and battery swap station

Overview

What is battery swapping station (BSS)?

Battery Swapping Station (BSS) proposes an alternative way of refueling Electric Vehicles (EVs) that can lead towards a sustainable transportation ecosystem. BSS has significant potential to function as a grid scale energy storage. This paper provides a broad review of relation of BSS with EVs and power grid.

What is a battery swapping station?

The ongoing research project features a battery swapping station that provides fully charged batteries to 100 two- and three-wheeler EVs in a designated rural area, as shown in Fig. 4. This existing swapping station network is part of the research initiative and has a tentative payback period of nine years.

Why do people use battery swapping stations?

The widespread use of battery swapping stations (BSS) is closely related to consumer psychology, habit, and experience with new energy service patterns; it is neither technically nor infrastructure oriented.

Are EV battery swapping stations a viable alternative to conventional EV charging stations?

Figure 2 Annual Number of Peer-Reviewed Studies on EV Battery Swapping Stations (2020–2025). The future of battery swapping stations (BSS) as an addition or alternative for conventional electric vehicle (EV) charging stations is complex but developing, grounded on a synthesis of current studies, case studies, and regulatory reviews.
