

# **Enterprise peak shaving and valley filling power storage**

## Overview

---

The Industrial and Commercial Energy Storage System captures the regular characteristics of power grid operation, stores electricity during the valley period when electricity prices are low, and then releases it for use during the peak period when electricity prices are higher, forming a dynamic energy regulation mechanism. How can peak shaving and valley filling improve energy consumption?

The practices of peak shaving and valley filling not only address the economic aspects of energy consumption but also enhance the reliability and sustainability of energy infrastructures.

Do energy storage systems achieve the expected peak-shaving and valley-filling effect?

Abstract: In order to make the energy storage system achieve the expected peak-shaving and valley-filling effect, an energy-storage peak-shaving scheduling strategy considering the improvement goal of peak-valley difference is proposed.

What is peak shaving & valley filling?

Manufacturing Plants: With peak shaving and valley filling, manufacturing facilities can optimize their energy use to coincide with the most beneficial times, both operationally and economically. The advancement of technology plays a pivotal role in enhancing the effectiveness of peak shaving and valley filling.

What is peak shaving?

These techniques are crucial in balancing energy supply and demand, thereby enhancing the efficiency and reliability of power systems. Peak shaving is a technique employed to reduce the load on the electricity grid during peak usage times.
