

# **Equipment for making solar container communication station inverter**

## Overview

---

How many inverters are in a shipping container?

Two inverters or 8 metric tons with one inverter. The optimized shipping container solution ensures cost-effective and safe transportability to the site. The station's optimized air circulation and filtering system together with thermal insulation enable operation in harsh temperature and humidity environments. The inverter station.

What is a solar inverter station?

A station designed for large-scale solar power generation. The inverter station houses all equipment that is needed to rapidly connect ABB central inverters to the medium voltage network of the photovoltaic plant, always complying with the standards of performance and quality required according to the project and its location. ABB's PVS800 central inverters are the result of decades of industry experience.

How a photovoltaic inverter station works?

In each inverter station all of the necessary equipment is integrated to connect to the medium voltage network of the photovoltaic plant, always complying with the standards of performance and quality required according to the project and its location.

How does ABB inverter work?

It enables easy and rapid connection to a MV transformer station. Depending on the size of the PV power plant, several ABB inverter stations can be used to meet the capacity need. The housing is based on a standard, insulated, steel-framed 20-foot shipping container. The total package weighs only 10 metric tons.
