Do offshore oil and gas platforms need battery energy storage systems?

Offshore oil and gas platforms (OOGPs) require battery energy storage systems (BESSs) with high volumetric density, high gravimetric density, high safety, a long life span, low maintenance, and good operational experience, amongst other BESS properties.

Can high-power energy storage systems be used in isolated power systems?

This paper presents a technology suitability assessment (TSA) of high-power energy storage (ES) systems for application in isolated power systems, which is demonstrated through the case of offshore oil and gas platforms (OOGPs).

Should energy storage be used in oil & gas operations?

However, due to the intermittent nature of wind power and high levels of energy security required by oil and gas operations, the use of energy storage (ES) might be inevitable. Additionally, ES can provide other advantages in terms of various power quality improvements .
