

Foldable containerized type for oil refineries

Overview

Modular refineries are pre-engineered, skid-mounted process units — distillation towers, heaters, reactors, utilities — fabricated in controlled yards and shipped in ISO-frame modules that bolt together like oversized Lego blocks. What is a mini refinery?

The Mini-Refineries are skid mounted, modular crude oil distillation units (CDU) which process from 50,000 to 450,000 metric tons (1000 - 9,000 BPD) of crude oil per year and are capable of producing a variety of finished products including naphtha (straight run gasoline), kerosene, arctic and summer diesel and fuel oil.

What are the different types of crude oil refineries?

What is a traditional refinery?

A traditional refinery is a high-capacity crude oil refinery constructed at a site involving various processing units to produce and meet high-quality petroleum products, such as high-octane gasoline, aviation or jet fuel, and ultra-low sulfur diesel.

What are modular crude oil refineries?

Modular crude oil refineries are prefabricated processing plants designed to distill crude oil into a range of petroleum products, including naphtha, kerosene, diesel, residual fuel oil, and off-gas.
