

# **G20 Base station abnormality plug and unplug power and try again**

## Overview

---

Why is my G20 not booting?

According to your thread, especially you said "the "Led green light" on the Power supply turns on when connected to the power strip, but as soon as I connect it to the G20 shuts right off", it seems like your power supply is malfunctioning and could be the cause of no boot on your computer. But it has to be tested to confirm this.

How do I Fix my Arlo base station not working?

Power cycle the Arlo base station by turning it off, unplugging it from the power source, waiting for a few seconds, and then plugging it back in. If the issue persists, you can try resetting the Arlo base station to its factory settings. Sometimes, you may encounter common error messages like " Base Station Offline " or " No Internet Connection."

How do I fix a faulty base station?

To fix this issue, you can follow these steps: 1. Check the power supply and make sure that the base station is properly plugged in. 2. Verify the Wi-Fi connection and ensure that the base station is within range. 3. If the problem continues, try restarting the base station or performing a factory reset.

How do I Fix my Arlo smarthub/base station?

Make sure the Arlo SmartHub/Base Station is not plugged into an outlet that is controlled by a switch. Try a different power outlet. If you are using a surge protector or power strip, connect the power adapter directly to a wall outlet. If the Internet LED is blue or green , your internet connection is restored.
