Overview

What is generator switchgear?

Generator switchgear refers to the collection of switches, circuit breakers, relays, and other equipment used to control, protect, and isolate power generators in an electrical power system. It is an essential component of power generation and distribution systems, ensuring the safe and reliable operation of generators.

What is a switchgear generator integrated power center?

This front access compact Pad Mounted Medium Voltage (2.4kV - 38kV) Switchgear is a Generator Integrated Power Center that uses innovative design methods and technology. This allows for the smallest footprint available on the market, while still offering an integrated transformer, output protection, and circuit breaker access.

What are the components and functions of generator switchgear?

Here are some key components and functions of generator switchgear: 1. Medium & Low Voltage Circuit Breakers: These are devices designed to interrupt the flow of electrical current in the event of a fault or overload. They are used to isolate the generator from the rest of the electrical system during maintenance or in case of emergencies.

Which circuit breakers can be used in the switchgear?

Apart from the generator circuit breakers, distribution circuit breakers according to standard IEC 62271-100 can also be used in the switchgear. Our medium voltage switchgear M12 in truck type design is primarily used as generator switchgear in gas power plants and hydroelectric power plants.
