Overview

What is a battery management system (BMS)?

Advanced BMS, such as EVESCO's, monitor cells, modules, strings, and the entire system in real time, using algorithms to balance and control the battery, manage thermal conditions, and prevent thermal runaway. A well-designed BMS is essential for battery safety and longevity. The below picture shows a three-tiered battery management system.

What is BMS architecture diagram?

Fig5. BMS Architecture Diagram(For reference) The protection and monitoring functions of the battery system are realized by the BMS battery management system. The BMS system of the battery system is managed in three levels, namely L1 BMS, L2 BMS, and L3 BMS. The main functions of each level of BMS are as follows:.

What are the parameters of 314ah battery pack?

Parameters for 314Ah Cell customized configurations, ease of maintenance, and future expansion capacity. The battery Pack consists of 104 single cells, the specification is 1P104S, the power is 104.499kWh, and the nominal voltage is 332.8V.

What is a Bess battery?

The battery is a crucial component within the BESS; it stores the energy ready to be dispatched when needed. A battery contains lithium cells arranged in series and parallel to form modules, which stack into racks. Racks can connect in series or parallel to meet the BESS voltage and current requirements.
