

# Havana Power Plant Energy Storage Station

## Overview

---

What is Havana power station?

Havana power station is a retired 488.0-megawatt (MW) coal-fired power station near Havana, Illinois. Contents 1Location 2Project details 3Retirement 4Ownership 5Emissions Data 6Death and disease attributable to fine particle pollution from Havana power station.

Did Cuba re-connect its electricity grid after a power outage?

By Dave Sherwood HAVANA (Reuters) -Cuba reconnected its national electrical grid and restored power to the majority of the capital Havana by late on Sunday, energy officials said, nearly two days after an island-wide outage knocked out power to 10 million people.

Why does Cuba have a bad energy system?

Cuba's energy system also suffers from years of reliance on domestic, poor-quality heavy crude oil, which is corrosive because it's high in sulfur. This has accelerated the wear and tear on boilers, turbines, and pipes in Cuba's power plants, shortening their life spans and causing frequent and costly outages.

What happened to Cuba's power grid?

Friday's grid collapse marked the Caribbean island's fourth nationwide blackout since October. Cuba's oil-fired power plants, already obsolete and struggling to keep the lights on, reached a full crisis last year as oil imports from Venezuela, Russia and Mexico dwindled.
