

High-Temperature Resistant Mobile Energy Storage Container for Steel Plants

Overview

What is a high temperature storage material?

The main technological innovation of the company relies on the developed high temperature storage material in the form of purposely produced pellets or bricks, with high heat capacity and thermal conductivity.

What is high-temperature energy storage?

In high-temperature TES, energy is stored at temperatures ranging from 100°C to above 500°C. High-temperature technologies can be used for short- or long-term storage, similar to low-temperature technologies, and they can also be categorised as sensible, latent and thermochemical storage of heat and cooling (Table 6.4).

What makes a good thermal storage system?

Systems based on sensible heat storage, latent heat storage and thermochemical processes are presented, including the state of maturity and innovative solutions. Essential for the effective integration of thermal storage systems is the optimal adaption to the specific requirements of an application.

Are thermal energy storage technologies a key enabler of industrial decarbonization?

In this context, thermal energy storage (TES) technologies have the potential to be a key enabler of increased renewables penetration and industrial decarbonization.
