

# **High voltage 1500V solar container energy storage system**

## Overview

---

The energy storage system uses simplified integration technology, installing PACK, distribution busbars, liquid cooling units, temperature control systems, and fire protection systems within a standard 20-foot container (2438mm-2896mm-6058mm), arranged in three compartments, ensuring safety control while being suitable for various transportation conditions and site designs. What is a stationary battery energy storage system?

The stationary battery energy storage systems feature multi-level short circuit protection at the pack, rack, and container levels. Advanced BMS and sophisticated data algorithms ensure thermal stability across both pack and rack levels. Our systems feature 314Ah battery cells integrated into an IP67-rated battery pack design.

What is a high-voltage battery management system (BMS)?

These components collectively form the high-voltage part of a BMS, enabling precise monitoring, control, and protection of the high-voltage battery pack in applications like electric vehicles or large-scale energy storage systems.

What is a high-voltage DC source?

A high-voltage DC source provides 1500V to simulate a rack. To verify the current accuracy of the current-sensing circuit, 1500 $\mu$ V (10mA across the 150 $\mu$  $\Omega$  shunt) is applied. Table 3-12 shows the insulation impedance accuracy data. The maximum error of RisoP and RisoN is 6.32% and 3k $\Omega$  when RisoP is 50k $\Omega$  and RisoN is not connected.

What is battery energy storage system (BESS)?

Battery Energy Storage System (BESS) is a technology that stores electrical energy in the form of chemical energy within batteries. This stored energy can be later converted back into electricity and released when needed. BESS plays a crucial role in enhancing the reliability, stability, and efficiency of electrical power systems.
