Overview

Which country is the largest market for energy storage in North America?

The United States is expected to be the largest market for energy storage in North America with an increasing demand for uninterrupted energy demand within the country. The country's power generation is dominated by coal and gas-fired power plants, and it is witnessing a shift from coal-based power generation to cleaner sources of energy.

Which energy storage segment will be the largest in North America?

Pumped-storage hydroelectricity (PSH) segment is expected to be the largest market during the forecast period in North America, owing to its ability to store large amount of energy as compared to other energy storage options and existing installed base. The Compressed air energy storage (CAES) can achieve an efficiency of 70-80%.

How many MWh is a residential energy storage system?

The data set totals 263 MWh, and covers all or a portion of installations in 20 states and the District of Columbia. WoodMac estimated that U.S. residential energy storage installations were 540 MWh in 2020, though an exact share of the market is not calculated here due to differences in the data such as when systems are considered installed.

Can energy storage be used in small nonresidential systems?

While this paper focuses on residential energy storage, some of the same ESSs may be used in small nonresidential systems. Nonresidential installations include installations at industrial sites, commercial buildings, nonprofits, government buildings, and similar locations, and do not include utility installations.
