

# How big is 10 kilowatts of solar energy

## Overview

---

What is a 10kW Solar System?

You might also see a 10kW solar panel system referred to as a 10kWp (kilowatt peak) system. In this context, there's no difference between the two. How many solar panels are in a 10kW system?

The number of solar panels in a 10kW system depends on the power rating of the panels themselves.

How many watts can a 10kW Solar System produce?

You can put together a 10kW system out of solar panels with output ratings that add up to 10,000 watts (W) - for example, 25 panels that all have a 400W rating. As you might gather from that example, 10kW is a particularly large size for a solar panel system.

How many solar panels are in a 10kW system?

The number of solar panels in a 10kW system depends on the power rating of the panels themselves. If you're using 400W panels, they'll each generate 400 watt-hours in standard test conditions. If you get 25 of these 400W panels installed on your roof, you'll have a 10kW system, which produces 10,000kWh per year in these conditions.

How much space does a 10kW Solar System need?

Since each panel occupies about 17 sqft, and you will need 33 panels for a 10kW system, the total physical space required for the system would be 567 sqft. How Many kWh Does a 10kW Solar System Produce?
