

How far is the grid-connected inverter of the solar container communication station from the residents

Overview

What is a grid connected solar system?

A grid-tied solar system has a special inverter that can receive power from the grid or send grid-quality AC power to the utility grid when there is an excess of energy from the solar system. Figure. Grid-Connected Solar Photovoltaic System Block Diagram.

How does a grid connected solar inverter system work?

When the power generated by the system exceeds the load demand, the excess power can be delivered to the grid, realizing “net metering”. Conversely, when the system does not generate enough power to meet the load demand, the required power can be purchased from the grid. Grid-connected solar inverter system have many advantages, including:.
