

# **How long does the energy storage power station last**

## Overview

---

What is energy storage duration?

When we talk about energy storage duration, we're referring to the time it takes to charge or discharge a unit at maximum power. Let's break it down: Battery Energy Storage Systems (BESS): Lithium-ion BESS typically have a duration of 1-4 hours. This means they can provide energy services at their maximum power capacity for that timeframe.

How long does a battery energy storage system last?

Let's break it down: Battery Energy Storage Systems (BESS): Lithium-ion BESS typically have a duration of 1-4 hours. This means they can provide energy services at their maximum power capacity for that timeframe. Pumped Hydro Storage: In contrast, technologies like pumped hydro can store energy for up to 10 hours.

How long does a solar energy storage system last?

An SDES with a duration of 4-6 hours in a home may be used to keep the lights on or the refrigerator cold during an outage. On a broader scale, utility-sized SDES systems may be used to replace wind power on a day with no wind. Different battery chemicals affect the energy storage duration achieved.

Can energy storage be used for a long duration?

If the grid has a very high load for eight hours and the storage only has a 6-hour duration, the storage system cannot be at full capacity for eight hours. So, its ELCC and its contribution will only be a fraction of its rated power capacity. An energy storage system capable of serving long durations could be used for short durations, too.
